

EarthRanger 2.24 Release Notes

May 2021

NEW FEATURES

Integrated Real-Time Messaging - EarthRanger has now added the ability to send and receive text-based messages from teams in the field with supported devices. An EarthRanger user, such as an Operations Room, can carry on multiple conversations simultaneously with different teams. New messages receive a notification through the EarthRanger User Interface and provides the ability to review the entire conversation and send messages directly from the EarthRanger computer.

Supported Devices: At introduction, Garmin inReach devices capable of two-way text messaging are supported. These must be associated with a Garmin inReach “Professional” Plan.

Additional devices will be added in the future.

IMPROVEMENTS

Icon Additions – New icons have been added for Gold Mining, Vandalism, Camps, and White and Black Rhino poaching.

FIXES

Heatmap Icon – Disabled heatmap icon for patrols that do not have tracks.

Immobility Alert – The immobility alert email that is sent now contains the duration the device has been immobile.

Geofence Alerts – Reports and alerts created from a geofence crossing now correctly contain the name of the geofence.

Event Category Characters (Admin) – Improved handling of restricted characters when configuring Event Categories.

Default Priority – Fixed situation which would occasionally ignore default priority when creating new reports.
