

# EarthRanger 2.25 Release Notes

June 2021

## IMPROVEMENTS

---

Messaging Permissions - EarthRanger has added the ability to set access permissions to messaging by individual user. Can be useful in allowing full access to view and create messages or restrict ability to only view messages.

ER Community – Added link in EarthRanger menu to directly access the EarthRanger Community site.

Subject Icons – Tapir and Peccary

Patrol Tableau View – Created views so that Tableau reports would have access to Patrol data.

API access to Event Categories – Ability to create and retrieve event schema through API with appropriate access privileges.

## FIXES

---

Filtering Large Results – Fixed an issue that resulted in the wrong results being displayed for searches with large result sets.

ER Track Pending Queue – Improved uploading of ER Track location information after periods without connectivity. Sometimes would not clear the queue consistently.
