

EarthRanger 2.16.1 Release Notes

January 2021

ENHANCEMENTS

Drawer Settings – The EarthRanger drawer on the right side of the screen will now remember its settings after being closed and reopened.

Cookie Acceptance – EarthRanger has implemented cookie settings in compliance with multiple privacy initiatives. This dialog will only be presented once per computer, asking user consent to store settings locally on the computer. These settings are typical on most websites to remember your settings between sessions. To revisit your settings once entered, settings can be found under your login name.

FIXES

Patrol Tracks – Fixed an issue with tracks not drawing properly when multiple points are in the same location.

Patrol End State – The status of a patrol is now correctly marked as completed when finished. This was resulting in patrols wrongly being displayed by filters.

Patrol End Date before Start Date – No longer is the user allowed to enter an End Date that is prior to the Start Date of a patrol.

Patrol Permissions – Fixed an unusual condition which sometimes displayed patrols for users without permissions.

Clearing Pinned Tracks – Fixed an issue that did not correctly remove a selected track from the map when multiple tracks were visible.

Patrol Escape Key – Click the ESC key now correctly dismisses the Patrol window when present.
