

# EarthRanger 2.18.1 Release Notes

March 2021

## IMPROVEMENTS

---

**Add Reports to Patrols** – Users can now associate existing reports with specific patrols. By opening the menu from the top right corner of the report details page, you now have a link to ‘Add to Patrol’ which will show a list of patrols which you can use to add this report. This is also useful for users entering reports using CyberTracker since those are created as individual reports.

**Automatic Resolving of Reports** – Reports can now be set to automatically resolve after a set time. This time can be set differently for each report type. This is particularly useful for automatically generated reports such as Fire Alerts, Deforestation Alerts, geo-fence breaks, and others.

**CarTrack Vehicle Trackers** – Added support for CarTrack Vehicle tracking devices.

## FIXES

---

**Patrol Date Filters** – Fixed issue which sometimes displayed the wrong list of Patrols when changing filters quickly, and correctly handled dates in the future.

**Patrol Title on Patrol Card** – Sometimes incorrectly displayed old Patrol Title after title changed by user.

**Patrol Loading Message** – Removed message stating ‘No Patrols to Display’ while patrols were being loaded.

**Patrol Track Icons** – Removed display of track icons when no tracked device is included in a patrol.

**Patrol Auto Start Indication** – Improved the UI to more clearly show when a Patrol Start or Patrol End is set for Auto-Start.
