

# EarthRanger 2.22 Release Notes

April 2021

## IMPROVEMENTS

---

ER2ER Additional Field Data – When transferring subject data between two EarthRanger systems, available data such as battery level temperature and now transferred as well.

Icons – New icons are available for several vulture species, and police stations.

API – Schema Last Changed API for use with third party apps including CyberTracker to be able to know when to reload a changed data model. (Note: This change is not yet available in Cybertracker)

API – Added ability to read and write report event type definitions by API.

## FIXES

---

Tracks not appearing – Fixed issue which sometimes resulted in tracks not appearing until browser was refreshed.

Global Forest Watch Link – Updated the direct link to Global Forest Watch reports to match their new format.

Report Colors on Map – Updated the map to show to correct priority colors for report icons.

Out of Sequence Observations – On rare occasions EarthRanger would receive gps locations from devices that were out of order and cause movement on the map to jump around. Improved handling of this situation.

Report History Update – Included several actions that were not correctly being displayed in the Report History.

Export of Zero Value – Numeric fields with a 0 were exported as blank. This has been changed to export the number 0.
