

# EarthRanger 2.21.1 Release Notes

April 2021

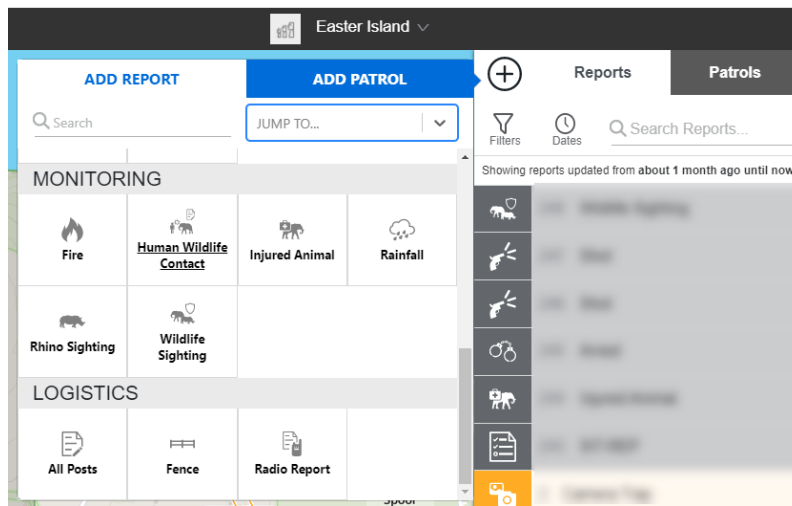

## IMPROVEMENTS

---

**Add Report / Add Patrol** – The familiar Add Report window has been improved to better handle the increasing number of Report Types and Categories, as well as the addition of Patrols. Users can now “Jump To...” a Report Category by clicking the drop down and selecting the desired category. This significantly improves the layout for users with larger numbers of categories.

Searching for a specific Report Type is also available to quickly navigate to the desired Report.

For sites with Patrols enabled, an addition tab is available at the top for Patrol Reports.

**Patrol API Optimization** – Optimized several of the Patrol related API calls to improve performance.

**Events API** – Reports can now be filtered by Create Date when accessing data through the API.

## FIXES

---

**Adding Patrol Reports to Incidents** – Reports that were created in association with a Patrol can now be correctly added to an unassociated Incident.

**Disabled Choices in CyberTracker** – Report field choices that have been disabled no longer appear in the CyberTracker drop down list.

**Choices API Inactive** – Fixed ability to filter out Inactive Choices when accessing through API.

**Polygon/Line Popup** – When jumping to a Polygon or Line feature, the info box now displays correctly.

**Source Provider Key Length** – Now handles more than 20 characters, helpful for ER2ER configurations.
